

SL-150 SEE RAY LED Street Light

1 June 2010 marked the one year anniversary of DPL Energy's installation of a Lavalux LED streetlight in Riverside, Ohio. The light is located on Huberville Ave. and provides a carpet of white light over a 150' long section of 50' wide street. The "See Ray" SL-150 gets its name from its distinctive sleek appearance. The See Ray SL-150 was designed from the ground up to take advantage of features provided by new LED technology. High brightness, high efficiency LEDs, combined with special optical elements project the light onto the ground in an even illumination pattern. The streetlight is designed for a 25 foot mounting height. Predictions indicate that the SL-150 will retain 70% of its initial brightness after 50,000 hours of operation.
